## MAIN TOPICS

- Antithrombotic therapy in management of atrial fibrillation
- Arrhythmias in athletes and children
- Biomarkers in arrhythmogenic cardiac diseases
- Brugada syndrome, long QT syndrome, and early repolarization syndrome
- Catheter ablation and noninvasive electrophysiology
- Clinical electrophysiology and novel mapping analyses
- Experimental basic science and Interpretation of ECG
- Evaluation of autonomic nervous system
- ICD/CRT-D therapy and noninvasive electrophysiology
- Interpretation of surface ECG in ACS
- Interesting ECG case reports
- Management of adult structural heart disease
- Noninvasive markers and triggers of SCD
- Normal variants of ECG
- New technologies of catheter ablation
- New antiarrhythmic agents
- Pharmacological management of atrial fibrillation
- Real-world evidence using DOACs (NOACs) in nonvalvular atrial fibrillation
- Risk stratification indices using 24-h Holter ECG
- Risk assessment for SCD
- Simulation and modeling basic science
- Sleep apnea and arrhythmias
- Technical advances in surface ECG and tele-electrophysiology
- Oral and poster abstract presentation
- Young Investigators award competition
